PROFESSIONAL SUMMARY

Product-focused senior software engineer and technical lead with experience building scalable fin-tech, blockchain, and AI-driven platforms. Strong background in system architecture, cloud infrastructure, and leading complex projects from MVP to production.

EXPERIENCE

Freelance Software Engineer — Self-Employed 2021 – Present

- Delivered production-grade web and backend systems for startups and SMEs
- Built blockchain-based reward and POS integration systems
- Led projects end-to-end, delivering production-ready systems from architecture to deployment
- Worked directly with clients on requirements, timelines, and delivery
- Maintained and updated existing websites, improving performance and usability

Selected high-impact projects detailed below

Chief Technology Officer (CTO) — **craftworksAsia Corp** 2019 – 2021

- Led overall technical vision while remaining hands-on in core systems
- Designed and implemented key backend and frontend components
- Reviewed code, set engineering standards, and ensured quality
- Partnered with product, design, and operations on roadmap and delivery
- Managed a small development team
- Established a remote-first culture enabling effective collaboration across time zones

Full-Stack Developer — **craftworks GmbH** 2016 – 2019

- Designed and developed end-to-end web applications across frontend, backend, and cloud infrastructure
- Built scalable APIs and data models supporting core business workflows
- Implemented responsive user interfaces with modern JavaScript frameworks
- Integrated third-party services, authentication, and payment systems
- Collaborated closely with product, design, and operations teams

Full-Stack Developer — **allaboutapps GmbH** 2014 – 2016

- Designed and implemented backend APIs to support native iOS and Android applications
- Developed mobile-optimized and responsive web applications aligned with mobile-first requirements

Frontend Developer — **meinKauf GmbH** 2012 – 2014

- Implemented user interface components based on design specifications and mockups

- Integrated frontend components with backend APIs
 - Fixed UI bugs and improved existing features
-

EDUCATION

BSc Software Engineering and Information Management — TU Vienna, Austria 2013 – 2019

Informatics and Business Organization — Technical High School Pinkafeld, Austria 2007 – 2012

SELECTED PROJECTS

Leading Developer — Confidential Client (Local Promotions Platform) 2018 – 2021

- Led the rewrite of an existing promotions and leaflets platform into a modern, multi-channel product
- Delivered a full ecosystem including public website, native mobile app, custom CMS, and back-end API
- Guided a team of 5 developers by refining requirements with stakeholders, distributing tasks, and ensuring delivery quality
- Took ownership of architecture decisions, key feature implementation, and overall technical direction
- Planned and executed migration of existing production data into the new system
- Designed and implemented cloud-based infrastructure on Azure using Kubernetes

Key Contributions

- Architected a sophisticated SEO sitemap generation strategy optimized for short-lived content with expiration dates
- Designed a robust caching strategy including geolocation-based caching for location-specific promotions
- Implemented optimized image generation and leaflet content extraction for performance and scalability
- Ensured system scalability and reliability using search, messaging, and caching infrastructure

Tech: React, React Native, Angular, Spring Boot, Azure, Kubernetes, Elasticsearch, RabbitMQ, PostgreSQL, Redis

Full-Stack Web Developer — GSI Tech 2025

<https://www.gsi-tech.ai>

- Joined an early-stage MVP focused on reconciling invoices with bank transactions
- Implemented secure bank transaction synchronization using Plaid
- Built intelligent invoice data extraction pipelines supporting PDF, image, Excel, and CSV formats at scale
- Applied AI-based approaches to reconcile invoices with bank transactions and generate probability scores for match confidence

- Integrated Stripe for subscription billing and extended it with custom subscription logic and feature gating
- Collaborated closely with product stakeholders to iterate quickly on core MVP functionality

Tech: React, Node.js, Python, AWS, PostgreSQL, Amazon Bedrock

Backend Integration Engineer — Confidential Client (DeFi Trading Platform) 2021 – 2022

- Served as the primary backend integration engineer for a decentralized crypto trading platform
- Designed and implemented a high-performance, real-time order matching engine capable of handling millions of orders
- Ensured low-latency order processing and deterministic matching behavior under high throughput
- Integrated backend systems with Polygon-based smart contracts for on-chain settlement and state synchronization
- Designed robust communication and error-handling mechanisms between off-chain services and blockchain components
- Collaborated closely with smart contract and frontend teams to ensure end-to-end system correctness and reliability

Tech: Node.js, Solidity, Redis, PostgreSQL, Polygon

SKILLS

- **AI / ML:** LLM-based data extraction, reconciliation, and scoring (Amazon Bedrock, OpenAI, Vercel AI SDK)
- **Languages:** Java, JavaScript, TypeScript, Python
- **Frameworks:** React, React Native, Spring Boot, Node.js, Vue
- **Cloud & DevOps:** AWS, Azure, Kubernetes, Docker, CI/CD (GitHub Actions, Jenkins)
- **Data & Messaging:** PostgreSQL, Redis, Elasticsearch, RabbitMQ, Kafka
- **Services:** Plaid, Stripe, Strapi, Adyen

LEADERSHIP & PRACTICES

- System architecture and technical strategy
- Team leadership and mentoring
- Agile / Scrum collaboration
- Remote-first engineering culture
- Code review and quality standards
